VUNVAULT - SAMPLE PENETRATION TEST REPORT

This document is a redacted sample, watermarked SAMPLE.
It shows the structure and phrasing of a real engagement report.
No client-identifying information is included.

SAMPLE

1. SCOPE

Target: one web application, one API gateway, scoped in writing.
Method: OWASP ASVS v4 level 2, NIST SP 800-115 framework.
Window: five business days of fieldwork.
Exclusions: third-party hosted services, denial of service.

SAMPLE

2. SAMPLE FINDING (REDACTED)

VV-2026-014 Broken object-level authorisation Severity: High
Endpoint: GET /api/statements/{id} returned another customer’s document when the identifier was swapped between two test accounts. Remediation: server-side ownership check added; re-test on day 9 passed with the same test cases.

SAMPLE

3. WHAT YOU RECEIVE

Findings register with risk ratings and reproduction steps.
Developer-ready remediation guidance per finding.
Executive summary written for the board, not for scanners.
One free re-test window within 30 days of the report.
